PRICE-LIST OF NURSERY STOCK, SIOUX CITY NURSERY & SEED CO.

SIOUX CITY, IOWA.

This PRICE = LIST is Our AGENT.

*It Promises that you will get
Good Stock and Fair Treatment.*

1896

We Guarantee the Fulfillment of this Promise.

This Price List tells you of Fruits, Trees, etc. as they are, and not what they are imagined to be. In the Best of Times it is hard enough to pay the high prices asked by Traveling Agents. In these Hard Times it is out of the question.

Why do you pay Agent's Prices when you positively can get the Very Best Stock of us at One Half and Less the cost. Convince yourself by examining Our Prices and compare with Agents Prices. It costs 50 to 60 per cent. to sell through agents. We know it for we have tried it. Then, too, when you buy Direct of Us you will get Just What You Order, and if mistakes are made we stand ready to correct them.

TIME OF SHIPMENT—We can ship from about March 25th to the close of the season. ORDER EARLY. We are certain to be short on VERY MANY KINDS of stock before the close of the season. You had better order us to book you for what you want EARLY. FIRST COME, FIRST SERVED. You can order stock booked, and pay for it when you want it shipped.

PAYMENT—Our terms are strictly CASH, before shipment, unless parties are favorably known. We refer you to any bank or business man in Sioux City as to our reliability.

CAUTION—Write your name and address plainly. Instruct us whether to ship by FREIGHT or EXPRESS.

FREE—We make no charge for Boxing or Drayage.

COMBINED, OR CLUB ORDERS—Our patrons frequently find it to their advantage to order for their neighbors, and in so doing, make a handsome saving by combining their orders to secure 10, 100 and 1,000 rates; but in order to do this, such order must be made by one person and by him divided, otherwise they are priced as single orders. We trust that the above explanation will induce our Patrons to send as large orders as they can, thereby benefiting themselves and us.

FIXED LOTS—Different kinds may be selected to make up lots of 10, 20, 50, 100, 1000, etc., to secure the lower prices, but they must be of the same age, or size, and from the same class of stock, i. e., all fruit trees, or all grapes, etc.

VARIETIES—We wish to call the attention of our patrons to this very important fact that we are only propagating and offering to our trade the very best and hardiest varieties known. This list is yet very short. There are many nurseries that are selling at Fancy Prices new varieties that, in nine cases out of ten are valueless. The place to test the value of new varieties is in the Nursery not on the Farm.

NURSERY STOCK BY MAIL.

To accommodate our patrons who do not get their mail at railroad towns, and to save express on small orders of Roses, Shrubs, small Fruits, etc., we have determined to open up a Mail Department, but we shall only mail the following kinds of stock, and in orders running from about 50 cents to \$2.00; Dewberries, Raspberries, Blackberries, Currants, Juneberries, Huckleberries, Gooseberries, Strawberries, Rocky Mountain Cherry, Grapes, Roses, Shrubs, Climbing Plants, Seedling Evergreens. In remitting don't fail to add to the Prices in the List at the rate of 10 cents for each \$1.00 of order, to pay postage. If your order is 50 cents, send us 55 cents; if \$1.00, send us \$1.10, etc. Small stock can be sent just as safely by Mail as by Express.

FRUIT TREE DEPARTMENT.

KINDS.	AGE.	SIZE.	EACH.	10	25	50	100	2000
APPLE OR CRAB,	2 yr.	4 to 5 ft.	15 cts.	\$1 00	\$ 2 25	\$ 4 00	\$ 7 00	\$ 13 00
	3 yr.	5 to 6 ft.	20 cts.	1 50	3 25	6 00	10 00	18 00
CHERRY, PLUM, PEAR,	2 yr.	4 to 5 ft.	30 cts.	2 25	5 50	10 00	18 00	30 00
or APRICOT,		5 to 6 ft.	40 cts.	3 25	7 00	14 00	27 00	50 00

We carry in Full Stock the following varieties, but have other varieties in Small Lots. If the purchasers will leave to us the selection of varieties, we will exercise great care in selecting only those suited to their latitude. We have in

APPLE—SUMMER—Duchess, Yellow Transparent, FALL—Wealthy, Snow, Tetosky. WINTER—Ben Davis, Wine Sap, Walbridge, Pewaukee, Haas, Mann, Perry Russett, Talman Sweet, Iowa Blush, R. Janet.

CRAB—SUMMER—Whitney. FALL—Martha, Transcendant, Red and Yellow Siberian, Golden Beauty. WINTER—Hyslop, Soulard, Briar Sweet.

CHERRY—Early Richmond, Olivet, Wragg, Ostheim, Eng. Morello, Large Mont.

PLUM—Wild Goose, Minor, Wolf, Desoto, Weaver, Forest Garden, Pottawattamie, Hawkeye.

PEAR—Keifer's H., LeConte.

Those varieties of Apple, Crab, Cherry, etc. printed in black letters are the best and hardiest.

We give more prominence this year to **Russian Fruits** than in former Catalogues. We describe and quote only the very best, and very hardiest, and you can rely on this stock being **Genuine**.

KINDS.	AGE.	SIZE.	EACH.	10	25	50	100

VARIETIES OF RUSSIAN STOCK.

APPLE—FALL—Longfield, No. 161, Fruit Yellow, very hardy, free from sun-scald, prolific bearer. **LATE FALL—Hibernal**, No. 378, Hardier than Duchess and just as prolific, fine market variety. **LATE WINTER—Repka Malenka**, No. 410, fruit yellow, quality excellent.
CHERRY—Vladimer, (25 Ore) very valuable, large as Montmorency, fruit black, flesh firm, juicy and nearly sweet. **Lutovka**—fruit large, dark red, pure flavored.
PEAR—Bessemanka—(No. 508) does well to the 44th parallel, fruit medium in size, nearly seedless, flesh tender and juicy. Plant on dry soil, and deep. **Gakovska**—(No. 347) This can be grown on dry soil to the far North. Quality good. Very valuable for cooking.

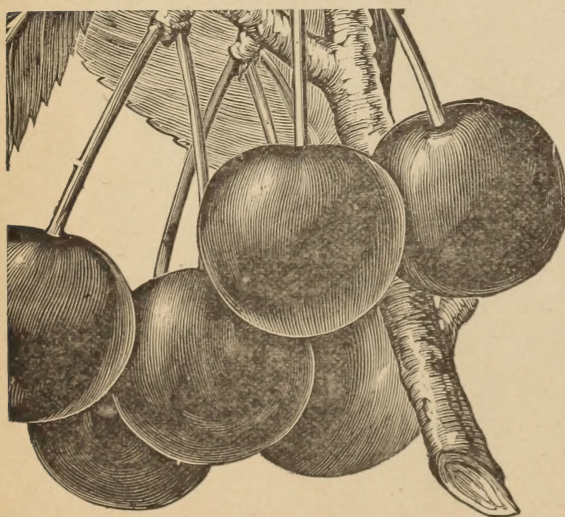

DWARF ROCKY MOUNTAIN CHERRY.

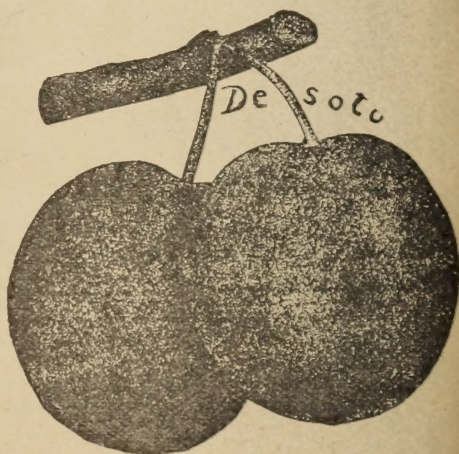

We Catalogue for the first time what we are fully persuaded is one of the finest Fruits that has ever been offered in the Northwest. We have taken great pains to study this Fruit, its habits, quality, hardiness, etc. We have made inquiries of many who have grown it, and all agree that it is a most valuable Fruit.

The originator speaks of it as follows:—"It is the most productive fruit of which I have any knowledge. I have picked eighty cherries off a branch twelve inches long. The fruit is jet black when ripe, and in size averages somewhat larger than the English Morello, the season of ripening being after all others are gone. In flavor, it is akin to the sweet cherries. It has the best system of roots of any shrub or tree I have ever planted, which accounts for the wonderful productiveness of plants at such an early age. It bears every year and is as prolific as a currant bush. Grows to a height of four feet, and has never been affected by insects, black-knot or other disease. Valuable for pies, sauce or for market purposes. It makes a handsome flowering bush, with its mass of pure white flowers."

SIZE	EACH	10
24 to 30 inches,	\$ 50	\$4 50
15 to 20 inches,	40	3 50
8 to 13 inches,	30	2 50

The **Wragg Cherry** is one of the most promising novelties in the fruit line. It is a sturdy grower, and immense bearer of large, handsome, dark colored fruit. Is one of the **VERY HARDEST** cherries, and is especially desirable in the North.

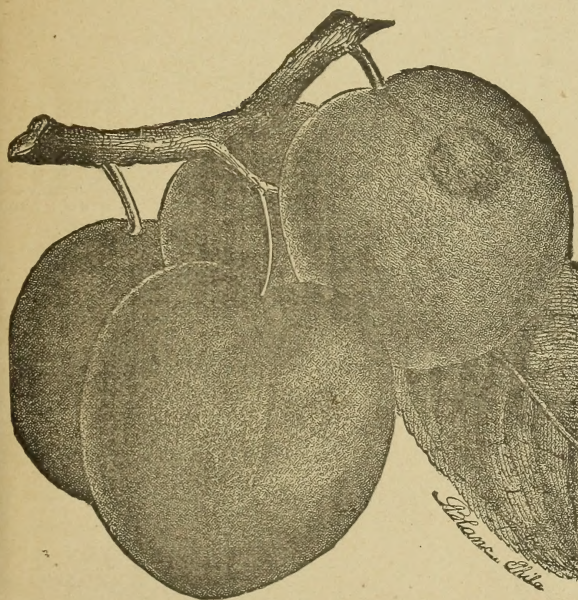

Desoto Plum—The hardest and best Plum known. It is placed at the head of the list by all horticulturalists in the N. W. Fruit red, and quality excellent.

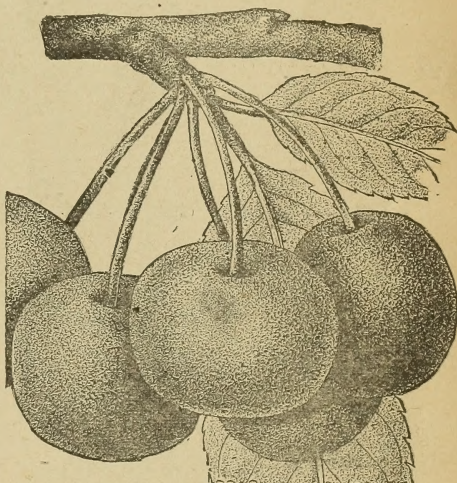

Ostheim—One of the hardest of Cherries. Brought from the nurseries of Dr. Regal, of St. Petersburg Russia. Fruit large, flesh liver-colored, tender, juicy and sub-acid.

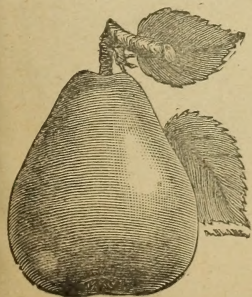

The fruit is large size, deep red, having very small pit, which separates readily from the flesh. Very rich to the taste, with none of the wild flavor perceptible in the Wild Goose. We offer a nice stock of this Plum for this season.

Hawkeye—Very large; color light mottled red, super or quality firm, carries well to market. Tree hardy, thrifty, annual bearer.

Early Richmond—Medium size, dark red, melting juicy, sprightly, acid flavor. This is one of the most valuable and popular of the Acid Cherries, and is unsurpassed for cooking purposes, and is exceedingly productive. Free. First of June.

ROOT GRAFTS.

	100	500	1000	5000
APPLE OR CRAB, - - -	\$1 00	\$4 00	\$ 6 00	\$25 00
PLUM OR CHERRY, - - -	2 00	8 00	15 00	

We cannot accept orders for **Root Grafts** later than March 20th, as our grafting will be completed by that date. Grafts should be planted just as early as possible.

JAPAN PLUMS.

These Plums have come to us from Japan—but are supposed to be native of Northwest China where the soil and climatic influence are similar to ours. Five or six of these varieties have been tested here in Iowa. They have been tested here at Sioux City for five years, and have come through the winters in good condition, and this without any protection. Fruit is one third larger than our native varieties, and quality of fruit much superior; in fact equal to our European varieties. Come into bearing early. Don't fail to try some of these Plums.

2 year	4 to 5 ft.	EACH.	10	25
3 year	5 to 6 ft.	35 cts.	\$3 00	\$7 00
		40 cts.	3 50	8 00

SATSUMA.

VARIETIES OF JAPAN PLUMS—Simons Plum—(Also called *Prunus Simoni*.) The leaves and bark look like the peach while the fruit resembles an apricot. It is a perfectly hardy tree from Northern China. Has a peculiar aromatic flavor not found in any other Plum. Very desirable both for fruit and as an ornamental tree. **Abundance**—Tree a strong and handsome grower, thrifty and hardy, commences bearing young, and annually produces a large crop of showy fruit in the greatest profusion. Large, red, flesh orange yellow, sweet, melting, juicy, and of most excellent quality. **Burbank**—Another exceedingly valuable sort that is proving a bonanza to all planters. A very vigorous grower, usually producing a crop second year after transplanting. Large, clear cherry red, flesh a deep yellow, very sweet, with a peculiar and very agreeable flavor, hardy, one of the best. **Satsuma**—Large, color purple and red with blue bloom, flesh firm, juicy, dark red or blood color, fine quality, pit very small. Hardy and vigorous grower.

SMALL FRUIT DEPARTMENT.

There is nothing that gives greater returns and more satisfaction than small fruits, and every family owning land, from a lot to a farm, should have a "patch of small fruits." It is a known fact that the climate and soil in Northwest Iowa produce the strongest and hardiest of small fruits. This is recognized by horticulturalists in the east and south, and many of them are either propagating or buying their small fruits from this section. It is undeniable that all kinds of small fruits, propagated here, are more vigorous, productive and hardy than those of the east or south.

Fay's Prolific—Decidedly one of the best Currants in cultivation. Has been widely planted and given general satisfaction. It is a strong grower, wonderfully prolific, and bears early. Fruit large, bright red, and of good flavor, and very uniform in size.

It is THE berry for market, or home gardens, and you cannot afford to omit it from your list.

ROOTS.

ASPARAGUS—Columbian Mammoth, white, -	EACH.	12	25	100	500	1000
	\$..	\$ 50	\$ 75	\$1 50	\$6 00	\$....
Conover's Colossal or Palmetto, -	..	40	50	1 00	4 00	6 00
RHUBARB -	..	75	1 75	5 00
HORSE RADISH, -	10	1 00

Every garden should have a large bed of Asparagus, Rhubarb and Horse Radish. They always grow, never freeze, the first to come in the spring, and require but little care; and last for a life time. The soil should be made as rich as possible.

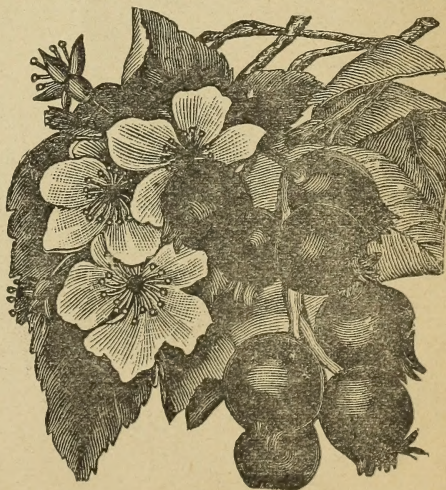

THE NORTH STAR CURRANT

is distinctly American. It is propagated in the extreme cold climate of Minnesota, where it has been tested in every conceivable way. The fruit is very large, uniform in size, of a bright red color, larger than the Red Dutch or Victoria, and rivalling the Cherry Currant, while each bush will yield double the quantity of fruit. It is less acid, much sweeter and more agreeable to eat out of hand or for table use. The bunches are from four to six inches long, densely packed with fruit, involving only half the labor in picking the crop. The berries cling to the branches long after the fruit is ripe, and do not shell or drop off. This habit lengthens the season of this Currant from four to six weeks. It is an early and prolific bearer, producing twenty-five per cent. more fruit than the common sorts. It is never affected by borers or insect enemies.

The North Star has a bright, healthy foliage, which is retained very late in the fall, thus aiding to develop the strongest possible fruit buds. Its strong, rapid growth makes it particularly desirable for cultivation in tree form, as it requires but little pruning. Is the most desirable variety known for propagation as a "True Currant." It is perfectly hardy, and will grow in any climate.

Buffalo Berry—Fruit resembles small currants, but is of richer taste, and literally covers the twigs and branches. If not gathered will remain on plants through the winter. Esteemed for pies, tarts, preserves, jellies, etc. A constant and prolific bearer, entirely hardy in all sections, and will thrive anywhere. A tree-like shrub of compact habit, well worth cultivating for ornamental purposes alone.

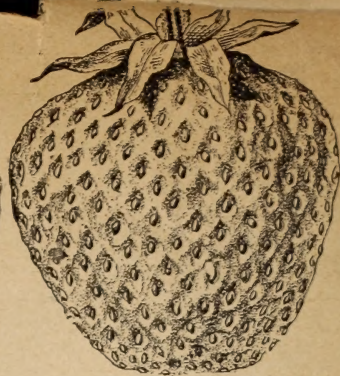

June Berry—IMPROVED DWARF—A good substitute for the large or Swamp Huckleberry or Whortleberry, which it resembles. The fruit is borne in clusters, reddish-purple in color, changing to bluish-black. In flavor it is of a mild, rich sub-acid; excellent as a dessert fruit or canned. It is extremely hardy. The blossoms are quite large and composed of fine white petals, which, with its bright, glossy, dark green foliage, renders it one of the handsomest of ornamental shrubs.

Parker Earle—Undoubtedly the best new variety offered for ten years. Very vigorous, remarkably productive. Stands drouth well.

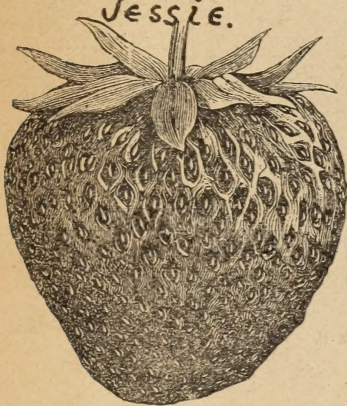

Warfield (No. 2)—P.—A variety that is very likely to supercede the Crescent, which it rivals in yield, and excels in size, beauty and firmness. Plant is a vigorous grower of bright, healthy foliage.

Beder Wood—By some considered the very best early berry. Immensely productive, healthy grower. Fruit large, bright red, excellent quality. For near market and home use this will be one of the most satisfactory.

Jessie.

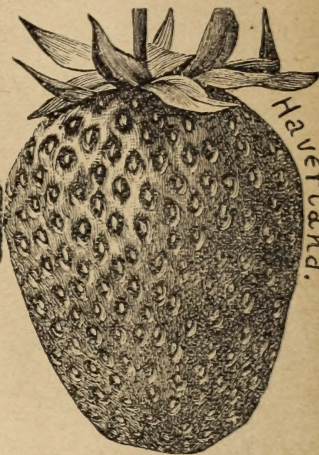

Jessie—The plant is very vigorous and healthy and a strong grower, resembling the Sharpless. The fruit is large, and holds its size well until the last picking, and is worthy of general planting.

Bubach.

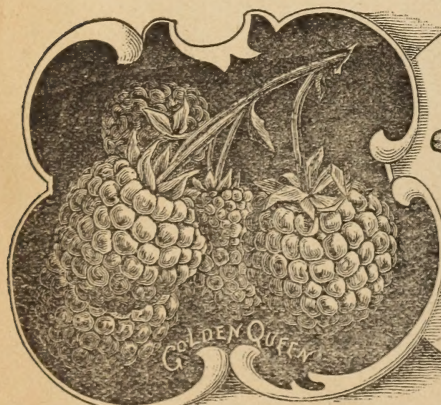

Bubach—(No. 5)—P. This berry combines great and uniform size, fine color, with unsurpassed productiveness and good quality of fruit. The leaves are very large, and the hottest sun does not appear to affect them. Carries every blossom to a perfect berry. In vigor of plant and yield of fruit it is wonderful, even under careless culture.

Haverland.

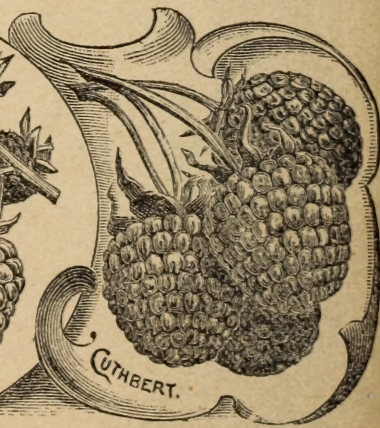

Haverland—P. Plants are very large, vigorous, and ripen their fruit evenly and early, holding on through the season. Fine in shape, very large, excellent flavor, and bright red.

Golden Queen—A beautiful large golden yellow berry, seedling of the Cuthbert. Beauty, quality and adaptability, succeeding in all sections. Canes hardy, of strongest growth, wonderfully productive.

Marlboro—Has proved to be one of the hardest, earliest and one of the best carrying red varieties known; brighter red in color, firm and hardy. Fruit very large and very productive. The largest early Red Raspberry yet introduced.

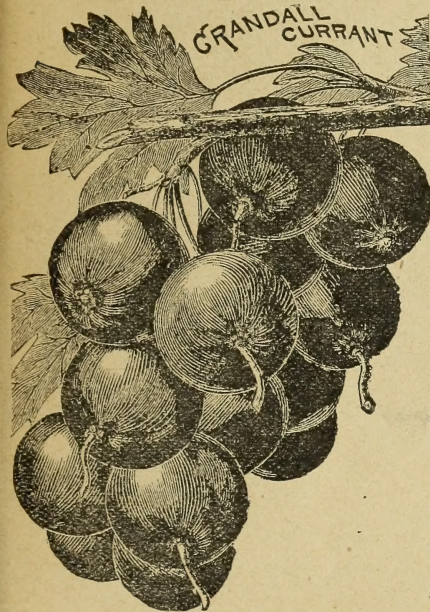

Cuthbert—A remarkably hardy variety stands the Northern winters and Southern summers equal to any. Berries very large, measuring three inches around, conical, rich crimson, and so firm they can be shipped hundreds of miles by rail in good condition.

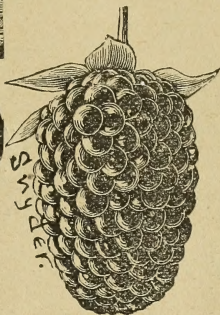

Shaffer's Colossal—Colossal both in bush and berry; carries to market well; excellent to dry, and unsurpassed for canning; berry dark crimson in color, and excellent in quality; a very valuable variety, does not sucker, but roots from the tips like Black Caps.

Turner—The Turner is valuable on account of its early ripening and fine quality. It is full medium size, and of fine red color. The bush is very hardy, standing uninjured where many varieties have winter-killed outright.

Grandall—A native black seedling of the western wild Currant, and much superior to any of the named varieties yet introduced; distinct from the European black varieties, and without their strong odor. Wonderfully productive, a strong, vigorous grower, large size, one-half to three-quarter inches in diameter, easily picked, can be shipped farther and kept longer than any other small fruit. Free from all attacks of insect enemies.

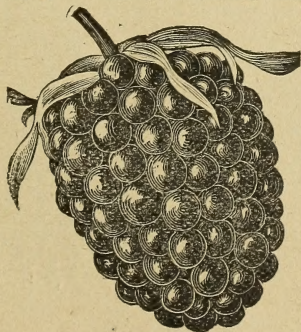

Snyder Blackberry—Extremely hardy, enormously productive, medium size; no hard, sour core, nor half as many thorns as Lawton or Kittatinny, and they are nearly straight and short. The most prolific Blackberry grown.

Ohio—The greatest producer among Black Caps, and for canning and evaporating, claimed to be the most profitable of all sorts, berries not quite as large as Gregg, but of finer quality, and the plants more hardy and will bear more successive crops.

Houghton Gooseberry—A medium sized American variety which bears abundant and regular crops, and never mildew; fruit smooth red, tender and good, very valuable and very hardy.

Bartel Dewberry—It is better than any blackberry for the northwest, as its trailing habit renders it as easily covered, where winter protection is desired, as a strawberry bed.

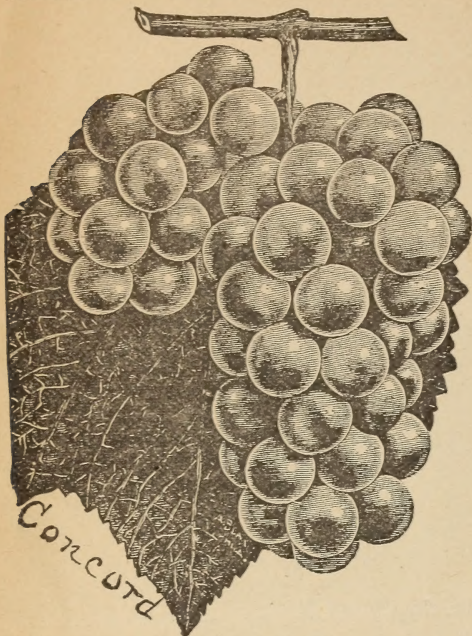

Gregg Raspberry—The largest of the Black Caps—fine flavored and very hardy; superior for table.

GRAPE VINES.

There is nothing in the fruit line that grows quicker, surer and with more abundant results than Grapes. Vines have never been so cheap, nor of better quality.

Concord—Bunches large, berries large, round; skin thick, and covered with bloom; flesh juicy sweet. Vine very hardy, vigorous and productive, at present the most popular of all our native sorts.

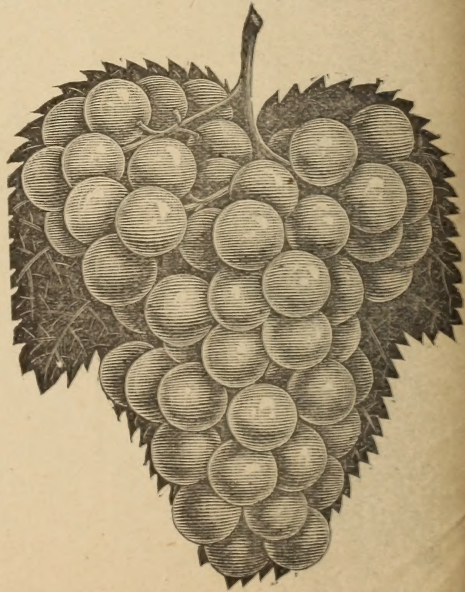

Niagara—This is the best White Grape today. Extraordinary vigorous grower; free from diseases, perfectly hardy, bunches large and beautiful, quality good. Ripens five to eight days before the Concord.

Worden—A seedling of the Concord, ripens earlier, larger in bunch and berry, and better in quality. Without doubt the best Black Grape ever known. Vine very hardy and healthy. See price in list.

Brighton—New, dark red. Ripens with, or before Delaware. Bunch large, long and shouldered, berries medium, skin thin, flesh tender, sweet, and of best quality. Vine vigorous and fairly productive. A valuable and desirable grape for garden and vineyard.

SEEDLING TREES.

We call your attention to the great superiority of the Nursery grown seedling over the river pulled. Grown in rich soil, receiving thorough cultivation, the roots are twice as large, and have many more rootlets. River pulled trees are pulled up, stripping off what few rootlets there may be, while the Nursery grown trees, being taken up with a tree-plow, the rootlets are left on. It is not claiming too much to say that Nursery grown trees are worth more than double the river trees. Our Seedlings are Nursery grown, except Cottonwood and Maple. We guarantee FULL COUNT and HEALTHY TREES.

The length of our Seedlings does not include the roots, but is from the ground up.

SHADE TREES!! SHADE TREES!!!

We have, without doubt the finest line of Shade Trees in the West. We have them in large quantities, too. They are all Nursery Grown, have been thoroughly cultivated, carefully pruned, are straight, smooth and well branched, and have large roots. They are all Transplanted Stock. We invite correspondence with Park, Cemetery and Street Committees, and all others wanting fine Shade Trees.

ROSES, SHRUBS, VINES, ETC.

ROSES—Hybrid, Perpetual, Climbing, Moss—leading varieties,	EACH	5	10
	25c	\$1.00	\$2.00

Our Roses are strong, two years old, and have been grown out of doors one season. All the above Roses are hardy, but a little loose covering of soil will make them bloom freer. In H. P. Roses the following three are the hardiest and best bloomers: Gen. Jacqueminot, brilliant crimson; Paul Neyron, deep rose; LaFrance, silvery white.

In Climbing Roses the Prairie Queen, bright rose; Seven Sisters, purplish crimson; Baltimore Bell, pale blush. In Moss Roses, Red Moss, White Moss and Princess Adelaide. Summer Roses—Harrison or Persian Yellow.

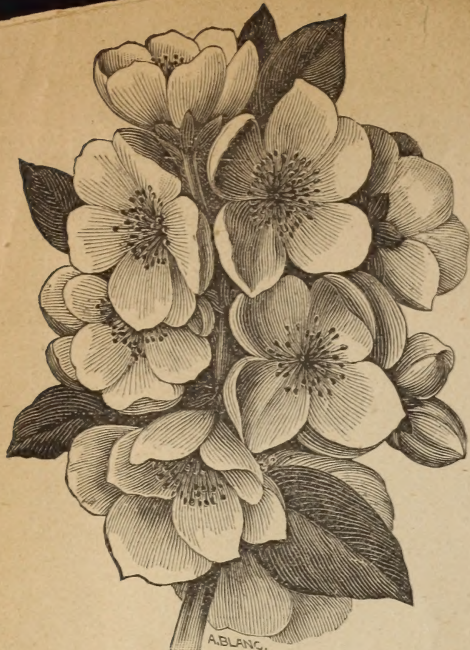

SHRUBS—Showballs, Lylac, Syringa, Fl. Almond, Yucca,	EACH	5	10
Fl. Currant, Lylac, Persian or white; Hydrangia, Japan Quince,	\$ 25	\$1 10	\$2 00
Bush Honey Suckle, Spirea Billardi, Berberry,	30	1 25	2 25

Our Shrubs are very fine, and will run from 20 inches to 3 feet.

VINES—Clematis Jackmani, Strong plants,	60	2 50
W'dbine, Wistaria, Honey Suckle, Scarlet, Chinese,	25	1 00	1 75

Wistaria—One of the most elegant and rapid growing of climbing plants; attains an immense size, growing at the rate of 15 or 20 feet in a season. Has long, pendulous clusters of pale blue flowers in May and June, and in autumn.

Japan Quince—This is one of the finest shrubs for the lawn. Needs no protection. Flowers delicate white and blush. Blooms last of April. 40c each.

Spirea VanHoutii—We can say positively that this shrub is not only the most beautiful of the Spiraeas, but that it is, without question, the most attractive lawn shrub for the Northwest known. It has pure white flowers in large clusters. Astonishingly profuse in blooming. Very vigorous and hardy. Blooms in May. Shrubs 2 to 3 feet. 40c each; five for \$1.25. If you only buy one shrub, buy this one.

Hydrangia paniculata grandiflora—This is one of the most valuable hardy shrubs. It attains a height of 4 or 5 feet, and is perfectly hardy in all parts of the country. The flowers are white, borne in immense pyramidal panicles. It commences flowering in July and continues until November.

EVERGREENS.
